

AUTOMATIC LABELING MACHINE FOR STILL AND SPARKLING WINES

AUTOMATIC LINE LABELING MACHINE suitable for labeling sparkling and still wines: the machine can be equipped with a shrinker for aluminum caps (sparkling wines) and a shrinker for heat-shrinkable caps (still wines). Labeling is carried out by means of a rotating container plate and pneumatic locking of the container neck: this system allows working with many formats, such as cylindrical and conical containers; resizing is quick, easy and, above all, very cheap because only a few machine components need to be replaced. The presented model is equipped with an electronic control panel and can store up to 20 different programs for different containers in memory.

Up to 4 labeling stations can be installed to apply a front label, back label, neck label or collar.

Possibility of electronic detection of the lower notch.

The device can be equipped with a printer for marking the expiration date or batch number.

Technical Specifications:

- Min/max dimensions: for cylindrical from 55 mm to 115 mm
- Maximum hourly production: 900 bph
- Marking tolerance: ± 1.5 mm

- Number of labeling stations: up to 4
- Cap shrinking unit: optional
- Compressed air requirement: 6-7 bar, consumption 150 l/min
- Power supply: 400V 50/60Hz
