ENOLMATIC VACUUM FILLER

**ENOLMATIC IS THE FAST, ROBUST AND VERSATILE VACUUM BOTTLE FILLER:
PROFESSIONAL FILLING OF YOUR PRODUCTS AT HOME**

Enomatic is our best selling single semi-automatic vacuum filling machine. This is the filling machine you are looking for if you desire to increase the production volume of your homemade products, and professionalize the bottling of wine, oil, beer, fruit juices, or other products.

Enomatic is made of high quality plastic materials. The vessel in polycarbonate material is suitable for the filling of both alcoholic products as well as using hot-fill processes.

Enomatic uses a vacuum pump to draw liquid from the tank into the bottle. The spout mounted on the machine determines the amount of liquid on the inside of the bottle, allowing the machine to stop filling automatically once it determines the bottle to be full.

Easy to use, fast, clean, easy to disassemble, customizable, easy to clean.

Semi-automatic machine

Fills up to 250 bottles per hour

The standard Enolmatic is provided with a plastic spout and food grade silicone gaskets suitable to be used with alimentary products. We sell stainless steel spouts recommended for hot-fill processes or the bottling of alcohol, as well as viton gaskets for the bottling of chemical products.

We sell interchangeable kits for special applications. Some of the kits we offer are the "Beer Kit", "Frutta Kit", and "Milk Kit".

EASY TO USE

A simple adjustment of the spout determines the level of the liquid inside the bottle. Done that, the machine automatically draw the liquid from the container and stops when the liquid reaches the level previously set. You can also adjust:

- the spout shaft, to adapt it to bottles of different heights
- the filling speed, when bottling semi-dense or foaming liquid products

EASY TO CLEAN

Enolmatic is designed to be easy to clean after each use

IT WORKS WITH ANY KIND OF LIQUID PRODUCT

Enolmatic can be used with our vast range of kits to bottle any type of liquid product. Bottles, jars, carboys or dams can be filled with wine, oil, beer, liqueur, fruit juice etc.

QUALITY MATERIALS

Enolmatic is built with high quality plastic materials. The polycarbonate vase is suitable both for filling alcoholic and high temperature products in conjunction with the optional stainless steel spout. The food-grade silicone gaskets can be used for alimentary products. Viton seals are available for the bottling of chemicals. The standard plastic spout can be replaced with a stainless steel spout, recommended for alcohol or high temperature products.

DO YOU HAVE SPECIFIC NEEDS?

Each product needs specific accessories to be properly bottle. That's why Enolmatic can be configured in many ways: explain us what are your needs and we will prepare the machine perfect for you.
