

FRAME SB MONO

Would you like to work permanently with only a single-sided undervine care device, but as comfortably and safely as possible? For this case we have developed the SB MONO, which can be used for front and rear mounting. The hydraulic width adjustment can be easily converted from right to left. The base frame can be hydraulically adjusted by 500 mm from 960 to 1,460 mm on one side by means of a cylinder, either to the right or to the left.
