

GRAPE BASKET PRESS, VINTAGE

This vertical hydraulic press is composed of a mounting plate and head made of painted steel connected by pressing cylinders. This configuration helps in making the pressing uniform and it allows to limit the size during the transport. All its parts in contact with the product such as pressing plate, cage and juice collecting pan are made of AISI 304 stainless steel or food grade rubber. AISI 304 stainless steel cage with laser-cut slots with different dimensions, product under reduced mechanical stress and superficial high-finishing for an easy cleaning. AISI 304 stainless steel juice collecting pan equipped with a draining disc able to ensure a suitable drainage also in the middle of the mass. Simple and quick cage and trough loading on the machine thanks to a high tolerance in the

approach angle of the forklift and to the centering system placed in the lower head. Electric control panel in compliance with European Directives 2006/95/CE (LV) and 2004/108/CE (EMC). Safety devices in compliance with European Directive 2006/42/CE (Machinery). Traditional operator terminal with integrated PLC complete with control push-button and display display for operator interface Touch Screen. 30 installed programs included the Intelligent Program.

The press is available in three basket capacities: 500, 1200 and 2300 liters.
