

HYDROPRESS SPEIDEL

You have never pressed such good juice so quickly and easily before: Simply grind fruit, grapes or berries and fill up the hydro press, turn the tap on and watch as the pressure of the incoming tap water compresses the ground material from the inside to the outside against the mesh basket.

The hydro press can also be used for pressing honeycomb, tomatoes, macerated tobacco or citrus fruit.

HIGH JUICE YIELD - LESS WASTE

The rapid pressing and the short flow distance preserve the vitamins; the juice has a wonderfully fresh aroma. Due to the high pressure applied, you achieve an exceptionally high juice yield, even if the press basket is only partially filled.

WITHOUT ELECTRICITY, WITHOUT MUSCLE POWER

An energy-saving, ingeniously simple drive mechanism: Connect up a garden hose to the normal domestic water supply and turn the tap on. The tap water expands the rubber diaphragm inside the press and presses the ground fruit against the mesh basket. The pressure and pressing time can be regulated by turning on the tap more or less.

INCLUDED IN DELIVERY

- Press
- Press bag
- Splash guard
- GEKA adapter to

TECHNICAL DETAILS

- Water feed / connection: GEKA quick coupling $\frac{3}{4}$ " thread
- Drain ball valve: male connector $\frac{3}{4}$ " with hose cover
- Max. water pressure: 3 bar

DIMENSIONS

- Height: 90 cm
- Diameter: 48 cm
- Outlet height: 30 cm
- Weight: 18 kg
