

SEMIAUTOMATIC LABELLING MACHINE FOR ROUND BOTTLES, LED

Gross price:
17 472 €

Net price:
14 205 €

Manual bench labeler suitable for self-adhesive labels to be applied on cylindrical containers such as bottles, jars, cans, tins, flacons; it is equipped with one single labeling station for dispensing the front label (or front and back labels with combo reels). Like its "big sister", the ET05, this machine includes the application of a back label as standard, and is especially designed for the labelling of containers made of PET or fragile materials in general. Bottle blocking is achieved by a foam roller which also activates the labelling cycle. The machine is equipped with an electronic control panel and can store in memory up to 19 different programs for as many different containers. Possibility of labeling also small cylindrical formats, with a minimum diameter of 16 mm. Possibility of labeling hexagonal/octagonal jars with orientation. The machine can't install the printer for marking the expiration date or the batch number.

- Dimensions min/max: for cylindrical from 55 mm up to 120 mm
- Maximum hourly production: 500 bph
- Labeling tolerance: max ± 3 mm
- No. labeling stations: 1
- Container ejection: manual
- Motorization: single-phase motors
- Pneumatic supply: not requested
- Power supply: 240 V 50/60Hz
