

SYRUP ROOM

The basic ingredient of sweetened drinks, sweetened sparkling and still waters is sugar syrup, which is prepared in a complex of devices called Syrup Room. Depending on the production requirements of a given beverage, the preparation of the syrup can be done cold or hot. The weight ratio of sugar and water in the prepared sugar syrup is about 60-65 Brix.

We can mention two types of Syrup Rooms:

- Batch Type Sugar Dissolving System (batch, tank), NCSD.
- Continuous Sugar Dissolving System (continuous). CSD.
