

TRIMMER EASYCUT LITE

The device is used to care for afforestations, reducing the excess green mass of plants, which improves the hygiene of their growth, as well as resistance to fungal diseases, among others.

Exceptionally durable, yet lightweight mechanical pruner (topper) model EasyCut created for work in flat vineyards, where the tractor works perpendicular to the terrain. The cutter bars can be individually adjusted to the appropriate requirements in terms of the contours of the bushes, such as the cutting angle, height and width. Special sickle knives and splash guards ensure exceptionally clean cutting (topping) of vine shoots.

Special features:

- Indirect drive of the knives using a V-belt - Engine protection in the event of a collision
- Collision protection using pneumatic shock absorbers on both vertical cutter bars
- The direction of rotation of the knives can be changed
